Appln No. 10/815614 Amdt. Dated: October 01, 2008

Response to Office Action of August 19, 2008

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the

2

application:

Listing of Claims:

1. (Currently Amended) A method of printing an interface surface associated with a

product item, the method including the steps of:

(a) determining product identity data, the product identity data uniquely

identifies being indicative of an identity of the product item such that the product

item is distinguished from each other product item; and,

(b) controlling a printer to thereby print a plurality of coded data portions on the

interface surface, the data of each coded data portion being indicative of the

product identity data and of the respective positions of the coded data portions on

the interface surface.

2. (Previously presented) The method of claim 1, wherein the determining step includes the

sub-steps of:

receiving indicating data at least partially indicative of the identity of the product

item; and,

generating, using the indicating data, the product identity data.

3. (Previously Presented) The method of claim 1, wherein at least one of the product item

and the interface surface is associated with an RFID tag, and the determining step includes

reading the RFID tag to determine the product identity data.

4. (Previously Presented) The method of claim 1, wherein at least one of the product item

and the interface surface is associated with a barcode, and the determining step includes

sensing the barcode to determine the product identity data.

5-7. (Canceled)

Response to Office Action of August 19, 2008

8. (Previously Presented) The method of claim 1, the method including the further step of:

encoding the product identity data in an RFID tag associated with the product item.

9-10. (Canceled)

11. (Previously Presented) The method of claim 1, wherein the coded data portions are

printed in infrared ink.

12-13. (Canceled)

14. (Previously Presented) The method of claim 1, wherein the determining step includes the

sub-steps of:

determining an identifier indicative of a nature of the product item;

generating a serial number; and

forming the product identity data from the identifier and the serial number.

15-16. (Canceled)

17. (Previously Presented) The method of claim 1, wherein the product identity data is

indicative of an EPC associated with the product item.

18-19. (Canceled)

20. (Previously Presented) The method of claim 1, wherein the coded data portions are

redundantly encoded using Reed-Solomon encoding.

21-26. (Canceled)

Appln No. 10/815614

Amdt. Dated: October 01, 2008

Response to Office Action of August 19, 2008

4

27. (Currently Amended) A printer for printing an interface surface associated with a

product item, the printer being adapted to print a plurality of coded data portions on the

interface surface, the data of each coded data portion being indicative of product identity

data and of the respective positions of the coded data portions on the interface surface, and

the product identity data uniquely identifies being indicative of an identity of the product

item, such that the product item is distinguished from each other product item.

28. (Previously Presented) The printer of claim 27, wherein the printer at least one of

communicates with and includes, a computer system, the computer system being adapted to:

receive indicating data at least partially indicative of an identity of the product

item; and

generate, using the indicating data, the product identity data.

29. (Original) The printer of claim 27, wherein the printer prints the coded data portions in

infrared ink.

30-31. (Canceled)

32. (Original) The printer of claim 27, wherein at least one of the product item and the

interface surface is associated with an RFID tag, the printer being adapted to read the RFID

tag to determine the product identity data.

33. (Original) The printer of claim 27, wherein at least one of the product item and the

interface surface is associated with a barcode, the printer being adapted to sense the barcode

to determine the product identity data.

34. (Previously Presented) The printer of claim 27, wherein at least one of the product item

and the interface surface is associated with an RFID tag, and the printer is further adapted to

encode the product identity data in the RFID tag.

Appln No. 10/815614 Amdt. Dated: October 01, 2008

Response to Office Action of August 19, 2008

5

35. (Previously Presented) The printer of claim 27, wherein the printer is further adapted to

encode the product identity data by printing a barcode on the interface surface or the product

item.

36-40. (Canceled)

41. (Previously Presented) The printer of claim 27, wherein the coded data portions are

redundantly encoded using Reed-Solomon encoding.

42-46. (Canceled)

47. (Currently Amended) A system for printing an interface surface associated with a

product item, the system including:

(a) a computer system for:

i. receiving indicating data indicative of an identity of the product item; and,

ii. generating, using the indicating data, product identity data uniquely

identifies indicative of the identity of the product item such that the product

item is distinguished from each other product item; and,

(b) a printing system for printing a plurality of coded data portions on the

interface surface, the data of each coded data portion being indicative of the

product identity data and of the respective positions of the coded data portions on

the interface surface.

48. (Canceled)
